Global Patient Monitoring Equipment Market 2017-2021

Description: Patient monitoring equipment with specialized versions are used to monitor physiological signs. These devices are either used as bed-side monitors or as remote patient monitors. Remote patient monitoring is one of the key factors for the buying criteria of the patient monitoring equipment in the market.

Hence, vendors are developing technologically advanced products that can be integrated with smartphones and applications, which can send test results on time and provide better patient care service. For instance, Dexcom developed the Dexcom G5 mobile continuous glucose monitoring (CGM) device, a mobile system, that sends glucose readings to a compatible smartphone every 5 minutes. In October 2014, the company received the FDA approval for its mobile application Dexcom SHARE, which is used in Dexcom G4 PLATINUM CGM system.

The analysts forecast the global patient monitoring equipment market to grow at a CAGR of 8.93% during the period 2017-2021.
