Global Augmented Reality and Virtual Reality Gear Market 2017-2021

Description: AR is a technology that diminishes the line between reality and computer-generated graphics. It enhances a user's experience, in terms of what the user sees, hears, feels, and smells. VR creates an immersive computer-generated environment that is like the real word. VR technology uses computers to develop a simulated artificial environment. With VR, a user can be a part of the experience rather than just view the content on a screen.

The analysts forecast the global augmented reality and virtual reality gear market to grow at a CAGR of 37.45% during the period 2017-2021.
