Description:
Vegetable oil is a natural oil that is extracted from the seeds, nuts and fruits of plants. It serves as a source of nutrients and industrial raw materials to mankind. Vegetable oil is today found in absolutely everything from food and household products, to make-up and cosmetics. In the food industry, vegetable oil is used as a cooking oil and as a constituent to margarine, shortening, non-dairy creamers and ice cream. It is also used in products where animal fats are deplorable on religious grounds. Moreover, the fatty acids derived from vegetable oil are also used in the production of cosmetics, bactericides and pharmaceuticals. Traditionally, the non-food uses of vegetable oil have been in the manufacturing of soaps, detergents as well as in the production of greases, lubricants and candles. Lately, the biofuel market has provided a significant non-food use for vegetable oil where it is considered as an alternative to mineral oil for use in power stations and as a feedstock for the production of biodiesel. As a result, the global vegetable oil market is growing at a healthy pace. Several other factors strengthening the demand for vegetable oil include population growth, improving living standards, changing dietary habits and an increasing demand particularly in emerging countries. The global vegetable oil market has grown at a CAGR of around 4% during 2009-2016 with consumption volumes reaching 178 Million Tons in 2016.
