Global Prepreg Market 2017-2021

Description: About Prepreg

Prepregs are fiber reinforcement pre-impregnated with a resin. The resins are often either thermoset or thermoplastic. The global prepreg market is largely driven by the growing composites market. The industry is striving for better acceptance of the product. This, along with cost cutting initiatives, is likely to increase the adoption of prepgregs. The consumption of prepreg is likely to increase owing to environmental concerns and the strong need for alternate processing methods and products that comply with regulations. High-performance applications in the aerospace, wind energy, and automotive sectors are increasingly adopting prepregs. These cost intensive industries can withstand the high-cost aspect of prepregs. However, great opportunities exist in the market for prepreg manufacturers and subsequent processors if more cost-effective prepreg materials and manufacturing processes are developed.

The analysts forecast the global prepreg market to grow at a CAGR of 10.34% during the period 2017-2021.
