Polymer Bulletin - Building and Civil Engineering Applications

Description: This Polymer Bulletin is a current awareness service from the Polymer Library, the world's largest database dedicated to polymer literature. Each time the abstracts database is updated with new records (approx. every two weeks) you will be sent a bulletin alerting you to any items that relate to polymers in building and civil engineering applications.

The usage of polymers in buildings, bridges, roads and other civil engineering applications has grown considerably during the last few decades. With an ever-expanding list of polymers which have such wide-ranging properties, architects and engineers have more materials to choose from for basic functions, plus their designs can go further than ever before. For example, composites used in structures offer flexibility and strength whereas polymeric foams provide excellent insulation. Scrap rubber used in the construction of roads slows down overall wear and tear and carbon fibre reinforced plastics can be utilised in repairing existing structures.

A Current Awareness service from us may be just what you need to update your knowledge with ease and accuracy without having to waste time, effort and money finding the information yourself.

E-mail delivery every two weeks.
