Animal Health Products Antibacterials Markets

Description: Veterinary antibacterials antiseptics that only act against bacteria comprise some of the most important pharmaceutical products on the animal health market. Yet despite a difficult regulatory environment, driven by concerns over the development of antibacterial resistance in consumers of livestock products, new products are still being launched. This has resulted in significant changes in the animal health products market.

This study offers a detailed examination of the shape of the animal health products market globally over the next several years specific to antibacterials, analyzing both the livestock and companion animal markets.
