Atlas and Textbook of Small Animal Neurology

Description: This book provides a comprehensive overview of small animal neurology covering the diagnosis and treatment of all clinical problems. It contains detailed information on neurological examination procedures, neuropathology and genetic disorders. There are also individual chapters on laboratory tests, anaesthesia, radiology and electrodiagnostics, rehabilitation, pharmacology and surgery.

This book usefully lists specific neurological diseases according to their location, and is an excellent tool for guiding professionals and students in their diagnosis and treatment.

Exceptionally well illustrated throughout, the book includes detailed imaging diagnostic illustrations showing neuro-anatomy and -pathology, an illustrated appendix, and a step-by-step demonstration of clinical neurological investigation and numerous examples of neurological diseases on the enclosed CD-ROM. Authored by a team of international experts on small animal neurology, the English language edition has now been revised by one of the most acknowledged neurologist in the US.

Key features

- Practical and comprehensive overview of small animal neurology
- Includes examination procedures, diagnosis and treatment
- Specific neurological diseases are listed according to their location
- Contains excellent illustrations throughout
- Includes CD-ROM with video sequences showing the individual steps of clinical neurological investigation and example clinical cases

Contents:

Contributers
Preface to the English edition
Preface to the second German edition
Preface to the first German edition
Abbreviations

1 Neurological Examination of Small Animals
1.1 Signalment
1.2 Anamnensis
1.3 General examination
1.4 Neurological status
1.4.1 Neurological examination methods
1.4.2 The sequence of the neurological examination
1.4.3 The main aspects of the examination
1.4.3.1 Mental Status
1.4.3.2 Behaviour
1.4.3.3 Posture
1.4.3.4 Movement
1.4.4 Postural reactions
1.4.4.1 Hopping on one leg or a pair of legs
1.4.4.2 Knuckling
1.4.4.3 Righting reaction
1.4.4.4 Extensor postural thrust reaction
1.4.4.5 Wheelbarrow test or walking on the forelimbs
1.4.4.6 Placement test
1.4.4.7 Tonic neck reactions
1.4.5 Investigation of the cranial nerves
1.4.5.1 Cranial nerve function
1.4.6 Spinal reflexes
1.4.6.1 Pelvic limb reflexes
1.4.6.2 Thoracic limb reflexes
1.4.6.3 Other reflexes
1.4.6.4 Abnormal reflexes
1.4.7 Sensory system
1.4.8 Localisation
1.4.8.1 Peripheral nervous system
1.4.8.2 Central nervous system
1.4.8.3 Spinal cord
1.4.8.4 Vestibular system
1.5 Ophthalmological examination
1.5.1 Examination of vision
1.5.1.1 Menace response test
1.5.1.2 Dazzle reflex
1.5.1.3 Cotton ball test
1.5.1.4 Obstacle course
1.5.2 Examination of the pupillary light reflex and the size of the pupils
1.5.3 Palpebral reflex
1.5.4 Corneal reflex
1.5.5 Tear production
1.5.6 Eyeball position
1.5.7 Normal vestibular nystagmus
1.5.8 Electrophysiological examinations
1.5.8.1 Electroretinography (ERG)
1.5.8.2 Visual evoked potentials (VEP)

2 Principles of Neuropathology
2.1 General neuropathology
2.1.1 Histopathology
2.1.1.1 Neuron
2.1.1.2 Astroglia, ependymal cells, plexus epithelium
2.1.1.3 Oligodendroglia / Schwann cells
2.1.1.4 Microglia
2.1.1.5 Neuropil, blood-brain barrier
2.1.1.6 Envelope cells
2.1.1.7 Neuronal degeneration / regeneration
2.1.2 Disturbances in development / malformations
2.1.2.1 Brain development – Pathogenesis of malformation
2.1.2.2 Defects of the neural tube: dysraphias
2.1.2.3 Constitutional hydrocephalus
2.1.2.4 Anomalies of the cortex: microgyria, macrogyria, lissencephaly
2.1.2.5 Malformations of the cerebellum
2.1.2.6 Hypo- and dysmyelinogenesis
2.1.3 Mechanical and physical disturbances
2.1.3.1 Increased brain pressure
2.1.3.2 Space-occupying processes /acquired hydrocephalus
2.1.3.3 Swelling of the brain and brain oedema
2.1.3.4 Infarct /cartilaginous emboli
2.1.3.5 Haemorrhage
2.1.3.6 Trauma
2.1.4 Metabolic disturbances
2.1.4.1 Ischemia / hypoxia / hypoglycaemia
2.1.4.2 Hepatic encephalopathy
2.1.4.3 Uraemic encephalopathy
2.1.4.4 Hyponatraemia (salt poisoning)
2.1.4.5 Hyponatraemia
2.1.4.6 Hypocalcaemia
2.1.4.7 Acidosis and alkalosis
2.1.4.8 Malnutrition
2.1.4.9 Diabetes mellitus
2.1.4.10 Hypothyroidism / hyperthyroidism
2.1.4.11 Storage diseases
2.1.4.12 Neurotoxicology
2.2 Classification of neurological diseases: VITAMIN D
2.2.1 V = Vascular disease
2.2.2 I = Inflammatory and infectious diseases
2.2.3 T = Toxic diseases
2.2.3.1 T = Trauma
2.2.4 A = Anomalies
2.2.5 M = Metabolic diseases
2.2.6 N = Neoplasia
2.2.7 D = Degenerative diseases
2.3 Investigation of the cerebrospinal fluid (CSF)

3 Genetic Neurological Siseases and Breed Predisposition
3.1 Genetic defects
3.2 Inheritance
3.3 Demonstrating the mode of inheritance
3.4 Testing for potential genetic carriers
3.5 Breeding methods to eradicate genetic defects
3.6 Diseases due to multifactorial causes

4 Basic Laboratory Investigations
4.1 Indications
4.2 Haematology
4.2.1 Anaemia
4.2.2 Polycythaemia
4.2.3 Leukocytosis
4.2.4 Leukopaenia
4.2.5 Thrombocytopenia / thrombocytosis
4.3 Biochemical blood parameters
4.4 Urine investigations

5 Anaesthesia
5.1 Basics of neuroanaesthesia
5.1.1 Control of intracranial pressure
5.1.2 Control of the carbon dioxide partial pressure
5.1.3 Control of blood pressure
5.1.4 Pharmaceuticals
5.1.4.1 Steroids
5.1.4.2 Diuretics
5.1.4.3 Anticonvulsants
5.1.4.4 Other pharmaceuticals
5.1.5 Positioning
5.1.6 Supervision of anaesthesia and hypothermia
5.1.7 Fluid therapy
5.1.8 Recovery period
5.2 Specific procedural techniques
5.2.1 CSF collection
5.2.2 Myelography
5.2.3 Hemilaminectomy, dorsal laminectomy, ventral slot, subluxation and fracture stabilisation
5.2.4 Intracranial disease
5.2.5 Electrodiagnostic investigations
5.2.5.1 Electroencephalography (EEG)
5.2.5.2 Electromyography (EMG)
5.2.5.3 Nerve conduction velocity studies
5.2.5.4 Recording auditory and visual evoked potentials
5.2.5.5 Electroretinography, somatosensory and motor evoked potentials
5.2.6 Imaging using computed tomography (CT) and magnetic resonance imaging (MRI)

6 Neuroradiology
6.1 Indications
6.2 Examination methods
6.2.1 Radiology
6.2.2 Radiological tomography (linear tomography)
6.2.3 Ultrasonography
6.2.4 Computed tomography and magnetic resonance imaging
6.2.4.1 Computed tomography (CT)
6.2.4.2 Magnetic resonance imaging (MRI)
6.2.4.3 Comparison of the examination methods
6.2.4.4 Principles of interpretation
6.2.5 Methods used in nuclear medicine
6.3 Spine
6.3.1 Radiography
6.3.1.1 Principles of interpreting spinal images
6.3.1.2 Soft tissues
6.3.1.3 Shape and course of the vertebral column
6.3.1.4 Number of vertebrae
6.3.1.5 Size, shape and contours of individual vertebrae
6.3.1.6 Radiopacity
6.3.1.7 Intervertebral spaces and intervertebral foraminae
6.3.1.8 Vertebral canal
6.3.1.9 Facet joints and other vertebral processes
6.3.2 Myelography
6.3.2.1 Contrast agents
6.3.2.2 Techniques
6.3.2.3 Restrictions, technical problems, artefacts and complications
6.3.2.4 Principles of interpretation
6.3.3 Discography
6.3.4 Epidurography
6.4 Specific diseases
6.4.1 Degenerative diseases
6.4.1.1 Disc degeneration and herniation
6.4.1.2 Degenerative lumbosacral stenosis
6.4.1.3 Other degenerative diseases
6.4.2 Tumours
6.4.3 Anomalies
6.4.4 Trauma
6.4.5 Metabolic diseases
6.4.6 Vascular diseases
6.4.7 Inflammatory diseases
6.5 Skull
6.5.1 Principles of interpreting imaging examinations
6.5.2 Viscerocranium
6.5.2.1 Nasal passages and sinuses
6.5.2.2 Eye
6.5.3 Cranial cavity
6.5.3.1 Middle and inner ear
6.5.3.2 Craniomandibular osteoarthropathy
6.5.3.3 Tumours of the calvarium
6.5.3.4 Metabolic disturbances
6.5.3.5 Trauma
6.5.3.6 Congenital malformations
6.5.4 Intracranial tumours
6.5.4.1 General considerations
6.5.5 Non-neoplastic diseases of the brain
6.5.5.1 Malformations
6.5.5.2 Haemorrhage and haematomas
6.5.5.3 Infarcts
6.5.5.4 Polio- and leuкоencephalomalacia
6.5.5.5 Inflammation and infection

7 Electrodiagnostics
7.1 Electrodiagnosis of the peripheral nervous system (PNS)
7.1.1 Electromyography (EMG)
7.1.1.1 Measurement methods
7.1.2 Electroneurography
7.1.2.1 Motor nerve conduction velocity (mNCV)
7.1.2.2 Sensory nerve conduction velocity
7.1.2.3 The electrophysiological assessment of the neuromuscular endplate
7.1.3 Auditory evoked potentials (AEP)
7.1.3.1 Indications
7.1.3.2 Measurement methods
7.1.3.3 Description and anatomical classification of the AEP
7.2 Electrodiagnostic examinations of the CNS
7.2.1 Electroencephalography
7.2.1.1 Physiological principles
7.2.1.2 Method
7.2.1.3 Equipment
7.2.1.4 Electrodes and their placement
7.2.1.5 Interpretation
7.3 Biopsy
7.3.1 Muscle biopsy
7.3.2 Nerve biopsy

8 Rehabilitation
8.1 Physiotherapy
8.1.1 Hydrotherapy
8.1.2 Massage
8.1.3 Kinesiotherapy
8.1.3.1 Passive movement
8.1.3.2 Active supported movement
8.1.4 Electrotherapy
8.1.4.1 Functional electrical therapy (FET)
8.1.4.2 Transcutaneous electrical nerve stimulation (TENS)
8.1.5 Thermotherapy
8.1.5.1 Application of heat
8.1.5.2 Removal of heat (Cryotherapy)
8.1.6 Magnetic field therapy

8.2 Adjuvant therapeutic measures
8.2.1 Bladder management
8.2.2 Decubitus prophylaxis
8.2.3 Individual attention

9 Neuropharmacology
9.1 Antibiotic therapy in neurological disease
9.1.1 Classes of antibiotics and their antibiotic spectra
9.1.1.1 Penicillins
9.1.1.2 Cephalosporins
9.1.1.3 Aminoglycosides
9.1.1.4 Chloramphenicol
9.1.1.5 Tetracyclines
9.1.1.6 Macrolides
9.1.1.7 Trimethoprim-Sulphonamides
9.1.1.8 Quinolones
9.1.1.9 Metronidazole
9.1.1.10 Four-quadrant antibiosis
9.1.2 Choice of antibiotic depending on neurological lesion localisation
9.1.2.1 Peripheral nerves
9.1.2.2 Polymyositis
9.1.2.3 Discospondylitis
9.1.2.4 Otitis media / interna
9.1.2.5 Meningitis /encephalitis
9.2 Steroid therapy
9.2.1 Chemistry, pharmacokinetics and clinical pharmacology
9.2.2 Physiological and pharmacological effects
9.2.3 Side-effects
9.2.4 Therapeutic uses
9.2.4.1 Replacement therapy
9.2.4.2 Therapeutic use
9.2.4.3 Glucocorticoids in neurological diseases
9.3 Analgesics
9.3.1 Principles of pain physiology and therapy
9.3.2 Opioids
9.3.3 Non-steroidal anti-inflammatory drugs
9.3.4 Other medications and treatments used in pain relief

10 Neurosurgery
10.1 Instrumentation
10.2 Brain
10.2.1 Brain tumours
10.2.1.1 General information
10.2.1.2 Premedication – Anaesthesia
10.2.1.3 Techniques
10.2.1.4 Problems
10.2.2 Cranial trauma
10.2.2.1 General information
10.2.2.2 Techniques
10.2.2.3 Problems
10.2.3 Hydrocephalus
10.2.3.1 General information
10.2.3.2 Techniques
10.2.3.3 Problems
10.3 Spinal cord/Spine
10.3.1 Diseases of the intervertebral discs
10.3.2 Diseases of the cervical intervertebral discs
10.3.3 Diseases of the thoracolumbar intervertebral discs
10.3.4 Diseases of the lumbosacral intervertebral discs
10.3.5 Tumours of the vertebral body, spinal cord and nerve roots
10.4 Spinal fractures / luxations
10.4.1 Emergency measures
10.4.1.1 Primary and secondary damage to nervous tissue
10.4.1.2 Diagnostic work-up
10.4.1.3 Conservative treatment
10.4.1.4 Surgical treatment
10.5 Peripheral nerves
10.5.1 Principles of peripheral nerve surgery
10.5.2 Frequency
10.5.3 Problems
10.5.4 Techniques
10.5.4.1 Nerve biopsy
10.5.4.2 Neurorrhaphy
10.5.4.3 Neurolysis
10.5.4.4 Neurectomy / rhizotomy
10.5.4.5 Neurotisation
10.5.4.6 Nerve transplantation
10.6 Surgery of the middle and inner ear
10.6.1 Anatomy of the middle and inner ear
10.6.2 Techniques
10.6.2.1 Preoperative preparation and positioning
10.6.2.2 Operation
10.6.2.3 Postoperative measures

11 Acupuncture
11.1 Introduction
11.1.1 Acupuncture in traditional Chinese medicine (TCM)
11.1.2 The acupoints
11.1.3 Choice of acupoints
11.1.4 Activation of the acupoints
11.2 The use of acupuncture in neurological disease
11.2.1 Choice of therapy
11.2.2 Possible indications for acupuncture
11.2.3 Combined treatment
11.2.4 Acupuncture as a prophylactic measure
11.3 Acupuncture analgesia and postoperative pain relief
12 Stabilization of the Neurological Emergency Patient
12.1 General aspects
12.1.1 Introduction
12.1.2 The respiratory tract and artificial respiration
12.1.3 Circulation
12.1.3.1 Shock
12.1.3.2 Dehydration
12.1.4 Neurological status
12.1.5 Pain
12.2 Stabilization of selected neurological emergencies
12.2.1 Craniocerebral trauma
12.2.1.1 Introduction
12.2.1.2 Pathophysiology
12.2.1.3 Emergency procedures in craniocerebral trauma
12.2.2 Status epilepticus
12.2.2.1 Introduction and definition
12.2.2.2 Pathophysiology
12.2.2.3 Therapy
12.2.2.4 Monitoring
12.2.2.5 Additional investigations and therapy
12.2.3 Intoxications
12.2.3.1 Introduction
12.2.3.2 General therapy
12.3 The neurological intensive-care patient
12.3.1 Introduction
12.3.2 The Rule of 20
12.3.2.1 Fluid replacement therapy
12.3.2.2 Blood pressure
12.3.2.3 Oncotic pressure
12.3.2.4 Albumin
12.3.2.5 Heart function and rhythm
12.3.2.6 Oxygenation and ventilation
12.3.2.7 Glucose
12.3.2.8 Electrolyte and acid-base balance
12.3.2.9 Intracranial pressure and consciousness
12.3.2.10 Hemostasis
12.3.2.11 Erythrocytes and hemoglobin
12.3.2.12 Immune status, leucocytes and antibiosis
12.3.2.13 Renal function and urine production
12.3.2.14 Gastrointestinal tract
12.3.2.15 Nutrition
12.3.2.16 Medication metabolism and dosage
12.3.2.17 Analgesia
12.3.2.18 Body temperature
12.3.2.19 Bandages and wounds
12.3.2.20 General nursing

13 Peripheral Nervous System and Musculature
13.1 Introduction
13.1.1 Classification of the changes in the PNS
13.1.1.1 Classification according to the differential diagnosis
13.1.1.2 Classification according to anatomical localisation
13.1.1.3 Classification according to pathological processes
13.1.2 Clinical symptoms
13.1.3 Adjunct investigations
13.2 Mononeuropathies
13.2.1 Traumatic damage to individual nerves of the fore- and hindlimbs
13.2.1.1 Radial nerve
13.2.1.2 Sciatic nerve
13.2.1.3 Peroneal nerve
13.2.1.4 Tibial nerve
13.2.1.5 Femoral nerve
13.2.2 Avulsion of the brachial plexus
13.2.3 Sacrocaudal fractures and luxations
13.2.4 Peripheral nerve sheath tumours
13.2.5 Lymphoma
13.3 Polyneuropathies
13.3.1 Inherited polyneuropathies
13.3.1.1 Spinal muscular atrophy
13.3.1.2 Motor axonopathy
13.3.1.3 Sensory axonopathies
13.3.1.4 Abnormal Schwann cell function
13.3.1.5 Metabolic diseases
13.3.2 Acquired polyneuropathies
13.3.2.1 Toxoplasmosis
13.3.2.2 Neosporosis
13.3.2.3 Acute polyradiculoneuritis
13.3.2.4 Chronic polyradiculoneuritis
13.3.2.5 Chronic inflammatory demyelinating polyneuropathy
13.3.2.6 Canine ganglioradiculitis
13.3.2.7 Diabetic polyneuropathy
13.3.2.8 Hypoglycaemic polyneuropathy
13.3.2.9 Hypothyroidism
13.3.2.10 Drugs and toxins
13.3.2.11 Denervating distal axonopathy
13.3.2.12 Paraneoplastic polyneuropathy
13.3.2.13 Spinal muscular atrophy in adulthood
13.3.2.14 Symmetrical distal polyneuropathy
13.3.2.15 Dancing Doberman disease
13.3.2.16 Dysautonomia

13.4 Neuromuscular transmission abnormalities
13.4.1 Presynaptic disturbances
13.4.1.1 Tetanus
13.4.1.2 Botulism
13.4.1.3 Tick paralysis
13.4.2 Synaptic disturbances
13.4.2.1 Organophosphates
13.4.3 Postsynaptic disturbances .
13.4.3.1 Myasthenia gravis
13.5 Monomyopathies
13.5.1 Ischemic myopathies
13.5.2 Myositis of the masticatory muscles
13.5.3 Extraocular myositis
13.5.4 Myopathy of the gracilis and semitendinosus muscles
13.5.5 Myopathy of the infraspinatus muscle
13.5.6 Myositis ossificans
13.5.7 Coccygeal myopathy (limber tail, cold tail)
13.6 Polymyopathies
13.6.1 Acquired polymyopathies
13.6.1.1 Toxoplasmosis
13.6.1.2 Neosporosis
13.6.1.3 Hepatozoon canis
13.6.1.4 Idiopathic polymyositis
13.6.1.5 Hypokalaemic polymyopathy
13.6.1.6 Hypercalcaemia
13.6.1.7 Hypocalcaemia
13.6.1.8 Hypothyroidism
13.6.1.9 Hyperthyroidism
13.6.1.10 Spontaneous hyperadrenocorticism
13.6.1.11 Iatrogenic steroid-induced myopathy
13.6.2 Congenital myopathies
13.6.2.1 Muscular dystrophy in the dog
13.6.2.2 Hypertrophic polymyopathy (muscular dystrophy) in the cat
13.6.2.3 Merosin deficiency myopathy
13.6.2.4 Labrador myopathy
13.6.2.5 Myopathy of the Devon Rex Cat
13.6.2.6 Degenerative polymyopathy in the Bouvier des Flandres
13.6.2.7 Nemaline-rod myopathy
13.6.2.8 Juvenile distal myopathy in the Rottweiler
13.6.2.9 Lipid storage myopathy
13.6.2.10 Mitochondrial myopathies
13.6.2.11 Glycogen storage disease type II in the Lapland Hound
13.6.2.12 Glycogen storage disease type III in the German Shepherd and Akita Inu
13.6.2.13 Glycogen storage disease type IV in the Norwegian Forest Cat
13.6.2.14 Malignant hyperthermia
13.6.2.15 Exertion-dependent rhabdomyolysis
13.6.2.16 Episodic muscle hypertonia in Terriers, Dalmatians and Cavalier King Charles Spaniels
13.6.2.17 Intermittent hyperkalaemia
13.6.2.18 Hypokalaemic polymyopathy in the Burmese Cat
13.6.2.19 Central core-like myopathy
13.6.2.20 Myotonia

14 Spinal Cord
14.1 Spinal cord diseases
14.1.1 Vascular diseases
14.1.1.1 Spinal cord infarcts (fibrocartilaginous emboli)
14.1.1.2 Spinal cord haemorrhage
14.1.2 Inflammatory changes
14.1.2.1 Discospondylitis
14.1.2.2 Myelitis
14.1.2.3 Feline poliomyelitis
14.1.2.4 Steroid-responsive menigitis-arteriitis (SRMA)
14.1.3 Traumatic diseases
14.1.4 Anomalies
14.1.4.1 Atlanto-axial subluxation (AASL)
14.1.4.2 Cervical malformation / malarticulation: Caudal cervical spondylomyelopathy .
14.1.4.3 Dermoid sinus
14.1.4.4 Myelodysplasia / Spinal dysplasia / Spinal dysraphism
14.1.4.5 Meningeal cysts / Intra-arachnoid cysts
14.1.4.6 Spina bifida
14.1.4.7 Sacrococcygeal dysplasia / Dysgenesis / Sacrocaudal hypoplasia
14.1.4.8 Occipital dysplasia
14.1.4.9 Vertebral malformations / Hemivertebrae
14.1.4.10 Congenital exostoses / Multiple cartilaginous exostoses / Osteochromatosis
14.1.5 Metabolic diseases
14.1.5.1 Hypervitaminosis A
14.1.6 Neoplastic diseases
14.1.7 Degenerative diseases of the spine and spinal cord
14.1.7.1 Disease of the intervertebral discs
14.1.7.2 Intervertebral disc extrusion
14.1.7.3 Intervertebral disc protrusion
14.1.7.4 Degenerative myelopathy of large dog breeds
14.1.7.5 Ataxia and myelopathy of the Terrier / Hereditary ataxia
14.1.7.6 Hound ataxia
14.1.7.7 Afghan myelopathy
14.1.7.8 Degenerative myelopathy of the Toy Poodle
14.1.7.9 Leukoencephalomyelopathy of the Rottweiler
14.1.7.10 Dalmatian leukodystrophy
14.1.7.11 Fibrinoid leukodystrophy / Encephalomyelopathy / Alexander's disease
14.1.7.12 Necrotising myelopathy of the Kooiker Hound
14.1.7.13 Axonopathy in the Labrador
14.1.7.14 Progressive degeneration in the Ibiza Hound
14.1.7.15 Calcinosi circumscripta / Tumoural calcinosis
14.1.7.16 Spinal muscular atrophy
14.1.7.17 Gangliosidosis
14.1.7.18 Globoid cell leukodystrophy (Krabbe's disease)
14.1.7.19 Mucopolysaccharidosis (MPS)
14.1.7.20 Hypomyelinogenesis
14.1.7.21 Degenerative lumbosacral stenosis (DLSS)
14.2 Bladder disturbances
14.2.1 Micturition reflex
14.2.1.1 Arbitrary control of micturition
14.2.1.2 Closure function of the urethra
14.2.1.3 Internal and external urethral sphincters
14.2.1.4 Innervation of the detrusor
14.2.2 Patients with micturition disturbances
14.2.2.1 Overstretching of the bladder
14.2.2.2 The patient does not urinate, the bladder can be manually expressed
14.2.2.3 The patient does not urinate, the bladder can be easily expressed or the urine is spontaneously released
14.2.2.4 Increased micturition frequency
14.2.2.5 Sudden cessation of urine flow during micturition
14.2.2.6 Urinary incontinence as a consequence of urethral incompetence

15 Vestibular Apparatus
15.1 Functional anatomy
15.2 Disturbances of vestibular function
15.2.1 Paradoxical vestibular syndrome
15.2.2 Clinical symptoms with bilateral disease
15.3 Neurological examination of a vestibular syndrome
15.4 Diseases of the peripheral vestibular apparatus
15.4.1 Otitis media / interna
15.4.2 Congenital vestibular diseases
15.4.3 Metabolic causes
15.4.4 Idiopathic causes (geriatric or idiopathic syndrome)
15.4.5 Neoplastic disease
15.4.5.1 Neurofibroma
15.4.5.2 Osteosarcoma / fibrosarcoma
15.4.5.3 Tumour in the cerebellopontine angle
15.4.5.4 Cholesteatoma
15.4.5.5 Ear polyps
15.5 Diseases of the central vestibular apparatus
15.5.1 Metabolic causes
15.5.2 Neoplastic diseases
15.5.2.1 Neoplasms in the cerebellopontine angle
15.5.2.2 Choroid plexus papilloma

16 Cerebellum
16.1 Anatomy and physiology
16.2 Symptomatology and localisation of cerebellar lesions
16.3 Differential diagnoses (VITAMIN D) and investigation methods
16.4 Diseases
16.4.1 Congenital cerebellar disease
16.4.1.1 Cerebellar hypoplasia associated with viral diseases
16.4.1.2 Malformation of the cerebellum
16.4.1.3 Cerebellar atrophy
16.4.1.4 Storage diseases
16.4.1.5 Degenerative diseases of the CNS associated with cerebellar symptoms
16.4.2 Acquired diseases of the cerebellum
16.4.2.1 Vascular diseases of the cerebellum
16.4.2.2 Cerebellar inflammation and infections
16.4.2.3 Cerebellar Trauma
16.4.2.4 Metronidazole intoxication
16.4.2.5 Idiopathic tremor (cerebellitis) or White Shaker Syndrome
16.4.2.6 Cerebellar tumours

17 Brain Stem
17.1 Anatomy
17.2 Diseases
17.2.1 Infarct of the brain stem
17.2.2 Inflammatory diseases of the brain stem
  17.2.2.1 Distemper
  17.2.2.2 FIP encephalomyelitis
  17.2.2.3 Granulomatous meningoencephalitis (GME)
  17.2.2.4 Tick-borne encephalitis (TBE)
  17.2.2.5 Protozoal meningoencephalitis
  17.2.2.6 Rabies
  17.2.2.7 Aujeszky’s (Pseudo-rabies) disease
  17.2.2.8 Necrotising encephalitis of Yorkshire Terriers
  17.2.2.9 Focal bacterial meningoencephalitis
  17.2.2.10 Post-vaccination encephalitis
  17.2.2.11 Post-vaccination rabies
  17.2.2.12 Feline immunodeficiency virus (FIV) encephalopathy
  17.2.2.13 Feline spongiform encephalopathy (FSE)
  17.2.2.14 Herpes virus encephalitis
  17.2.2.15 Unclassified viral meningoencephalomyelitis
  17.2.2.16 Steroid-responsive meningoencephalomyelitis (SRME)
  17.2.3 Tumours of the brain stem
  17.2.4 Malformations of the brain stem and the caudal cranial fossa
  17.2.5 Metabolic-toxic diseases of the brain stem
   17.2.5.1 Metronidazole intoxication
   17.2.5.2 Thiamine or Vitamin B1 deficiency encephalopathy
   17.2.6 Diseases of the cranial nerves
    17.2.6.1. Trigeminal neuritis (Idiopathic trigeminal neuropathy)
    17.2.6.2 Idiopathic facial nerve paralysis
    17.2.6.3 Megaoesophagus
    17.2.6.4 Idiopathic cricopharyngeal dysphagia (achalasia)
    17.2.6.5 Idiopathic laryngeal paralysis
    17.2.6.6 Hereditary laryngeal paralysis
    17.2.7 Deafness
17.3 Neuro-ophthalmology
  17.3.1 Abnormal pupillary light reflexes (PLR)
   17.3.1.1 Lesions of the retina or the optic nerve
   17.3.1.2 Lesions of the optic chiasm
   17.3.1.3 Lesions of the optic tract
   17.3.1.4 Lesions of the oculomotor nerve (CN III)
   17.3.1.5 Lesions of the oculomotor (Edinger-Westphal) nucleus
   17.3.2 Central blindness
   17.3.3 Internal ophthalmoplegia
   17.3.4 External ophthalmoplegia
   17.3.5 Horner’s syndrome
   17.3.6 Feline and canine dysautonomia
   17.3.7 Feline spastic pupils
   17.3.8 Hemidilatation of the pupils in the cat
   17.3.9 Facial nerve paralysis
   17.3.10 Pourfour du Petit syndrome
   17.3.11 Strabismus
18 Cerebrum
18.1 Anatomy and physiology
18.2 Neuroanatomical localisation
18.3 Adjunct investigations
18.4 Diseases of the cerebrum
  18.4.1 Vascular disease
   18.4.1.1 Ischemia and infarct
   18.4.2 Inflammatory / infectious diseases
    18.4.2.1 Borna disease
    18.4.2.2 Contagious canine hepatitis
    18.4.2.3 Tick-borne encephalitis
    18.4.2.4 Feline polioencephalomyelitis
    18.4.2.5 Feline spongiform encephalopathy (FSE)
    18.4.2.6 General overview of inflammatory cerebral disease
18.4.3 Trauma
18.4.4 Anomalies
18.4.4.1 Hydrocephalus
18.4.5 Metabolic / toxic diseases
18.4.5.1 Oxygen deficiency
18.4.5.2 Disturbances in glucose metabolism
18.4.5.2.1 Hypoglycaemia
18.4.5.2.2 Hyperglycaemia
18.4.5.3 Hepatic encephalopathy (HE)
18.4.5.4 Uraemic encephalopathy (UE)
18.4.5.5 Toxic encephalopathies
18.4.5.5.1 Pesticides
18.4.5.5.2 Metaldehyde
18.4.5.5.3 Strychnine
18.4.5.5.4 Lead
18.4.5.5.5 Medications
18.5 Epilepsy
18.5.1 Idiopathic or primary epilepsy
18.5.2 Secondary or symptomatic epilepsy
18.5.3 Hyperaesthesia syndrome in the cat (“Running fits”)
18.6 Differential diagnoses for primary and secondary epilepsy
18.6.1 Cataplexy / narcolepsy
18.6.2 Syncope
18.7 Neoplasia
18.7.1 Neuroepithelial tumours
18.7.2 Meningiomas
18.7.3 Tumours from surrounding tissues and metastases
18.8 Degenerative diseases
18.8.1 General criteria
18.8.2 Specific diseases
18.8.2.1 Leukodystrophies
18.8.2.2 Lipidoses and gangliosidoses
18.8.2.3 Glucocerebrosidoses
18.8.2.4 Sphingomyelinosis (Niemann-Pick disease)
18.8.2.5 Glycoproteinoses
18.8.2.6 Fucosidosis
18.8.2.7 Galactosidases
18.8.2.8 Mannosidases
18.8.2.9 Mucopolysaccharidases
18.8.2.10 Glycogenoses
18.8.2.11 Cerebroid lipofuscinosis
18.8.2.12 Lafora disease
18.8.2.13 Ammon's horn necrosis (polioencephalomalacia)

19 Behavioural Problems and Abnormal Behaviour
19.1 Aggression in the dog
19.1.1 Dangerous dogs and prognosis
19.1.2 Status-related aggression
19.1.3 Status-related aggression between dogs in the same household
19.1.4 Aggression between dogs that meet by chance
19.1.5 Fear-related aggression
19.1.6 Pain-related aggression
19.1.7 Territorial aggression
19.1.8 Maternal aggression, abnormal or lack of maternal behaviour, and infanticide
19.1.9 Aggression as a part of hunting behaviour
19.1.10 Aggression as a part of play behaviour
19.2 Aggression in the cat
19.2.1 Territorial aggression
19.2.2 Fear-related aggression
19.2.3 Play and hunting aggression
19.2.4 Maternal aggression
19.2.5 Re-directed aggression
19.2.6 Therapy
19.3 Problems associated with excretory behaviour of cats
   19.3.1 Excretory behaviour outside of the litter tray
   19.3.1.1 Rudiments of treatment
   19.3.1.2 The optimal cat litter tray / box location
   19.3.1.3 Medical treatment
   19.3.2 Marking with urine (spraying)

19.4 Fears and phobias in the dog and cat
   19.4.1 Fear of animate and inanimate stimuli
   19.4.2 Situation-related fears and phobias

19.5 Compulsive disturbances
   19.5.1 Manifestations of compulsive disturbances in the dog and cat
   19.6 Cognitive dysfunction in the dog and cat

19.7 Medical behavioural therapy
   19.7.1 Important neurotransmitter systems
   19.7.2 Benzodiazepines
   19.7.3 Tricyclic antidepressants
   19.7.4 Selective serotonin reuptake inhibitors
   19.7.5 Buspirone
   19.7.6 Monoamine oxidase B inhibitors

20 Parasitic Neurological Diseases of the Dog and Cat
   20.1 Trypanosomiasis in the dog
   20.2 Neosporosis in the dog
   20.3 Toxoplasmosis in the cat and dog
   20.4 Babesiosis in the dog
   20.5 Acanthamoeba infections
   20.6 Encephalitozoonosis
   20.7 Neurological diseases caused by helminths
      20.7.1 Infection with space-occupying cysticerci
      20.7.2 Infection with migrating larvae
      20.7.3 Angiostrongylosis of the dog
   20.8 Neurological diseases caused by arthropods
   20.9 Borreliosis

Appendices
   Appendix 1: Comparative sectional anatomy of the canine and feline brain
   Appendix 2: Breed-specific diseases of the dog
   Appendix 3: List of inheritable neurological diseases of the dog
   Appendix 4: List of inheritable neurological diseases of the cat
   Appendix 5: Drugs
   Appendix 6: Epidemiological overview of the neurological diseases seen in dogs between 1989 and 2000 at the Small Animal Clinic in Bern, Switzerland

Ordering:
Order Online - http://www.researchandmarkets.com/reports/666363/
Order by Fax - using the form below
Order by Post - print the order form below and send to

   Research and Markets,
   Guinness Centre,
   Taylors Lane,
   Dublin 8,
   Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct and select the format(s) you require.

Product Name: Atlas and Textbook of Small Animal Neurology
Web Address: http://www.researchandmarkets.com/reports/666363/
Office Code: SCDKTL9T

Product Formats
Please select the product formats and quantity you require:

<table>
<thead>
<tr>
<th>Product Format</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard Copy (Hard Back)</td>
<td>USD 244 + USD 29 Shipping/Handling</td>
</tr>
<tr>
<td>E-Book (PDF)</td>
<td>USD 244</td>
</tr>
</tbody>
</table>

* Shipping/Handling is only charged once per order.

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: 
You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: 
Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: 
Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
