Theory of Simple Liquids. Edition No. 4

Description: Comprehensive coverage of topics in the theory of classical liquids

Widely regarded as the standard text in its field, Theory of Simple Liquids gives an advanced but self-contained account of liquid state theory within the unifying framework provided by classical statistical mechanics. The structure of this revised and updated Fourth Edition is similar to that of the previous one but there are significant shifts in emphasis and much new material has been added.

Major changes and Key Features in content include:

- Expansion of existing sections on simulation methods, liquid-vapour coexistence, the hierarchical reference theory of criticality, and the dynamics of super-cooled liquids.
- New sections on binary fluid mixtures, surface tension, wetting, the asymptotic decay of pair correlations, fluids in porous media, the thermodynamics of glasses, and fluid flow at solid surfaces.
- An entirely new chapter on applications to ‘soft matter’ of a combination of liquid state theory and coarse graining strategies, with sections on polymer solutions and polymer melts, colloidal dispersions, colloid-polymer mixtures, lyotropic liquid crystals, colloidal dynamics, and on clustering and gelation.

- Expansion of existing sections on simulation methods, liquid-vapour coexistence, the hierarchian reference of criticality, and the dynamics of super-cooled liquids.
- New sections on binary fluid mixtures, surface tension, wetting, the asymptotic decay of pair correlations, fluids in porous media, the thermodynamics of glasses, and fluid flow at solid surfaces.
- An entirely new chapter on applications to ‘soft matter’ of a combination of liquid state theory and coarse graining strategies, with sections on polymer solutions and polymer melts, colloidal dispersions, colloid-polymer mixtures, lyotropic liquid crystals, colloidal dynamics, and on clustering and gelation.

Contents:

Chapter 1. Introduction
Chapter 2. Statistical Mechanics
Chapter 3. Static Properties of Liquids: Thermodynamics and Structure
Chapter 4. Distribution function Theories
Chapter 5. Perturbation Theory
Chapter 6. Inhomogeneous Fluids
Chapter 7. Time-dependent Correlation and Response Functions
Chapter 8. Hydrodynamics and Transport Coefficients
Chapter 9. Theories of Time correlation Functions
Chapter 10. Ionic Liquids
Chapter 11. Molecular Liquids
Chapter 12. Applications to Soft Matter
Appendix A. Fluctuations
Appendix B. Two Theorems in Density Functional Theory
Appendix C. Lemmas on Diagrams
Appendix D. Solution of the PY Equation for Hard Spheres
Appendix E. Scaled Particle Theory
Appendix F. An Exact Integral Equation for p(1)(r)
Appendix G. Some Basic Properties of Polymers
Appendix H. Density Profile of a Polymer Brush

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:

Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by Wire Transfer: Bank details will be provided on the invoice which you will receive after you place your order with us.

If you have a Marketing Code please enter it below:
