Aquafeed Market by End Consumption by Additives by Geography - Global Trends & Forecasts to 2019

Description: Aquafeed Market by End Consumption (Fish, Crustaceans, Mollusks, Others), by Additives (Antibiotics, Vitamins, Antioxidants, Amino Acids, Feed Enzymes, Feed Acidifiers, Others), by Geography - Global Trends & Forecasts to 2019

As the global population inches towards nine billion by 2050, there will be a need for more food and jobs which a growing aquaculture industry can help meet. In the coming decades, many developing countries will feel pressure to shift more of their resources toward aquaculture production, due to its environmental and economic efficiencies. Aquaculture species such as tilapia, catfish, and crawfish are far more efficient at converting traditional feedstuffs into edible protein as compared to traditional livestock and poultry species. As a result, many forms of aquaculture production also result in reduced environmental impacts when compared to traditional animal husbandry.

This research report provides in-depth market insight into the global aquafeed industry. Aquaculture can make a unique contribution to nutrition in many parts of the world by virtue of its extremely high productivity and the fact that aquatic crops are primarily protein crops rather than sources of starch. Also, many aquatic organisms are better converters of primary foods than ruminants, fowl, or swine. Aquaculture has the potential of producing large quantities of lower-cost, protein-rich food. This report takes into account the wide range of factors and their influence on the aquafeed market dynamics. The market drivers and restraints are explained in detail in the report, along with growth opportunities.

The global aquafeed market is expected to reach a value of $123,990.3 million by 2019, at a CAGR of 12.1% from 2014 to 2019 by revenue, and by consumption value, it is projected to reach 89,479.0 million by 2019, at a CAGR of 10.7% from 2014 to 2019. The aquafeed market size is estimated by segmenting the market into micro-markets, based on the share of each additive, animal species, and geographical region. The market data is available from 2013 to 2019, with a forecasted CAGR from 2014 to 2019.

Various secondary sources such as encyclopedias, directories, and databases were used to identify and collect information for this extensive commercial study of the aquafeed market. The primary sources experts from related industries and suppliers were interviewed to obtain and verify critical information as well as to assess the future prospects of the aquafeed market.
