
Description:

Technological advancements and sophisticated communication channels have raised a challenge in front of the Law Enforcement Agencies (LEAs) to fight against the criminal activities and the increasing cyber attacks. LI is the legally grounded process by which a provider of networks and/or communication services gives authorized officials access to communications of individuals or organizations.

For countering the growing terrorism threats, most of the countries in the world are now adopting LI and have already framed laws for the same. It helps to ease and improve the investigation process for collecting evidences and better inspection. Though the interception of information related to a particular person or a group of people is legally approved, still LI solution providers have major concerns regarding accuracy, privacy, and security of the data. The reason for these concerns is that the process could pave the way for illegal access of the information by any employee of the Service Providers (SPs).

The global LI report provides an insight on the key market players, challenges, drivers, and future scope in the market. Major players such as Cisco, Siemens, Utimaco, Verint, Aqsacom, SS8, ZTE, and others are profiled in the report. The report also focuses on global adoption trends and future growth potentials across different regions in the market.
