Indonesia construction chemicals market has been witnessing significant growth over the last few years. Rising investments in the construction industry and infrastructure expansion are the two major factors propelling demand for construction chemicals in the country. Increasing consumer preference towards technically advanced materials with high performance and better efficiency is also driving the market. The Government of Indonesia, along with some private players, is also encouraging investments in the country’s construction industry, which is expected to propel the demand for construction chemicals such as specialty admixtures, waterproofing compounds, flooring compounds, etc. over the next five years. The construction chemicals market is treading towards consolidation with PT Sika Indonesia, PT BASF, PT FOSROC, W. R. Grace, Aquaproof and PT Pidilite Indonesia being the leading market players.

According to the report titled ‘Indonesia Construction Chemicals Market Forecast & Opportunities, 2019’, the construction chemicals market in Indonesia is forecast to register a CAGR of 13.6% till 2019. Majority of construction chemicals demand in Indonesia is emanating from Java and Sumatra as most of the infrastructure development and construction projects are concentrated in these regions. Segment-wise, admixtures and waterproofing chemicals are likely to exhibit higher market growth as compared to other segments. Due to the country's tropical climatic and high rainfall conditions, demand for waterproofing compounds is expected to remain high in Indonesia over the next five years. Upcoming construction projects in Jakarta, such as extension of the Plaza Indonesia Mall are likely to boost growth in the flooring compounds segment. In addition, the need for repair and restoration of extremely old buildings is also picking pace rapidly, which is expected to drive demand for repair and rehabilitation chemicals in the future.
