Global Human Growth Hormone Market 2015-2019

Description: About Human Growth Hormones

Growth hormone is a proteinaceous hormone consisting of 191 amino acid residues and is secreted by the anterior part of the pituitary gland. In children and adolescents, growth hormones are produced and secreted in high levels and promote linear growth. However, as an individual reaches the adult stage, its level starts declining and primarily perform anabolic functions. The direct activity of a human growth hormone, exerted via its interaction with the human growth hormone receptor, includes metabolic and anti-insulin activities.

The analysts forecast the Global Human Growth Hormone market to grow at a CAGR of 4.22 percent over the period 2014-2019.
