Global Turbo Generator Market 2015-2019

Description: About Turbo Generators

A turbo generator is a mechanical device that is used to produce electrical power. A turbine is connected to the turbo generator and produces electricity by converting mechanical energy into electrical energy. The steam-powered turbo generators supply most of the world's electrical power. Turbo generators are also used in other renewable power plants such as geothermal plants. Furthermore, these are also used in turbo electric drives in some rail locomotives (gas turbine) and ships (steam and recently gas).

The analysts forecast the Global Turbo Generator market to grow at a CAGR of 1.8 percent over the period 2014-2019.
