Global Acute Myeloid Leukemia Therapeutics Market 2015-2019

Description: About Acute Myeloid Leukemia

Acute myeloid leukemia, also known as acute myelogenous leukemia, is a hematopoietic disorder that starts either in hematopoietic stem cells or lineage-specific progenitor cells. Neoplasms arise from bone marrow, however, it spreads quickly into the blood. In the later stages of the disorder, it spreads to spleen, lymph node, liver, brain, spinal cord and testicles. Clonal expansion of the myeloid blasts and the loss of normal hematopoiesis are the main characteristic of acute myeloid leukemia. The disease affects the elderly people with age of 67 years. Fever, pallor, fatigue and hemorrhages are some of the clinical symptoms of the disease. Smoking, exposure to certain chemicals such as benzene, exposure to radiations, cancer patients, who are treated with chemotherapy, blood disorder or genetic mutations are some of the risk factors for the development of acute myeloid leukemia in patients.

The analysts forecast the Global Acute Myeloid Leukemia Therapeutics market to grow at a CAGR of 19.75 percent over the period 2014-2019.
