Global Scar Treatment Market 2015-2019

Description:
About Scar Treatment
Scars are treated using both invasive techniques such as surgery and non-invasive techniques such as OTC treatment products. These products and procedures are used to treat all types of scars, such as keloid scars, contracture scars, hypertrophic scars, and atrophic scars. Scars caused by surgery can be removed by surgical revisions, although most people are reluctant to go for another invasive procedure after a surgery. Apart from the easily available OTC scar treatment products, patients can also opt for less-known alternatives such as cryotherapy, clinical peel, and compression.

The analysts forecast the Global Scar Treatment market to grow at a CAGR of 9.09 percent over the period 2014-2019.
