EMR/EHR Market in the US 2015-2019

Description:  
About EMR/EHR

An EMR/EHR is defined as a digital version of the traditional paper-based medical record for a patient, which includes the patient's information, history of care, clinical data, and information from multiple sources that are maintained within a hospital, clinic, or health center. Recently, the terms EMR and EHR have been used interchangeably. An EMR/EHR permits a clinician to track data over time, identify patients due for preventative screenings, help check patients on certain parameters such as blood pressure readings or vaccines, and monitor overall quality of care within the practice. An EMR/EHR helps make the process of patient record keeping easier, more accurate, comprehensive, and more efficient. EMR/EHR is one of the best ways to boost patient safety, manage chronic illnesses, and improve the efficiency of a practice.

The analysts forecast the EMR/EHR market in the US to grow at a CAGR of 6.53% over the period 2014-2019.
